Kavish Khoodeeram

Senior Software Engineer

kav.khood@gmail.com · github.com/Kavish07 · linkedin.com/in/kavish-khoodeeram-38909ba9

SUMMARY

Senior software engineer with 12+ years designing and shipping backend platforms — from transport ticketing systems to hospital records and insurance extranets. Builds and maintains backend platforms in Java and Spring Boot for clients across insurance, healthcare, telecom and transport — designing REST APIs, database schemas, SSO/MFA flows, and the CI/CD pipelines that ship them. Experience in agile scrum teams and strict V-model environments. Completed a Master's in Artificial Intelligence at the University of Mauritius (Oct 2026); builds AI side projects in Python. 12 years experience · 10 clients delivered for · 5 industries.

EXPERIENCE

Senior Software Engineer *May 2026 — Present*

Delivering multiple projects end-to-end — spanning a .NET 10 / Angular 21 stack and a Java / Spring Boot / Hibernate & JPA stack, with Keycloak auth, PL/SQL, and GitLab CI/CD pipelines — applying functional and technical knowledge throughout, with Claude Code as a core part of the development workflow for implementation and task automation.

.NET 10, Angular 21, Keycloak, PL/SQL, Java, Spring Boot, Hibernate / JPA, GitLab CI/CD, Claude Code

Senior Software Engineer *Feb 2024 — Present*

On-call support across three insurance platforms, resolving priority incidents during off-hours for a Canadian client.

Java, Spring Boot, Kubernetes, PL/SQL, Unix

Senior Software Engineer *Nov 2025 — Apr 2026*

Backend-only project built on Java with Hibernate & JPA for persistence, using RabbitMQ for asynchronous messaging between services — developed in GitLab with JUnit test coverage.

Java, Hibernate / JPA, GitLab, JUnit, RabbitMQ

Senior Software Engineer *Jul 2025 — Nov 2025*

Set up a locally-hosted LLM behind a Spring Boot / Hibernate & JPA backend with a React.js front end and Keycloak auth, then built on it to read, sort, and organize data extracted from incoming PDFs — developed in GitLab with JUnit test coverage.

Spring Boot, Hibernate / JPA, React.js, Keycloak, GitLab, JUnit, LLMs, Local Hosting, PDF Processing

Senior Software Engineer *Jan 2025 — Jun 2025*

Automation workstream run in parallel with on-call support: designed and deployed several bots with Microsoft Copilot Studio to assist across different internal projects.

Microsoft Copilot Studio, Automation, Bots

Senior Software Engineer *May 2024 — Nov 2024*

Built a management extranet from scratch on Spring Boot and Keycloak, connecting to partner platforms over SSH. Owned the REST API, database schema, SSO/MFA implementation, dev environments and code review for a 6-person agile team.

Spring Boot, Spring Security, Keycloak, OAuth2 / JWT, Hibernate / JPA, Liquibase, Docker, Azure

Senior Software Engineer *Mar 2023 — Dec 2023*

Hospital management system for a 7–8 person agile team: Java/Spring Boot/JPA on the back end, React.js + TypeScript on the front end, plus production bug fixes across both.

Spring Boot, Hibernate / JPA, React.js, TypeScript, GitLab, JUnit

Senior Software Engineer *Feb 2023 — Mar 2023*

Built a REST API from a spec defined in OpenAPI YAML for a small 2-person agile team.

Spring Boot, OpenAPI, Backbase, JUnit

Senior Software Engineer *Apr 2021 — Nov 2022*

Core development on ATLAS, a transport ticketing system (GAM project) — architecture, consultation/sales/after-sales features, and unit & scenario testing for a 5-person Scrum team.

C++, C, SpecFlow, NUnit, CMake, Git

Software Engineer *Jan 2017 — Apr 2021*

Owned a telecom revenue-sharing ("reversement") system — designing calculation features, managing CRON scheduling, writing shell scripts, and producing Jasper/BO reports for a 6-person waterfall team.

Java Struts 2, PL/SQL, Jasper, BOXI, SVN

Earlier roles *2014 — 2017*

Started out as a junior Java developer on an insurance/banking platform at Accenture (Spring, Hibernate, AngularJS), then built SharePoint/.NET reporting tools at Tylers and web applications in PHP at SEDECO.

Java, Spring, AngularJS, ASP.NET, SharePoint, PHP

SELECTED PROJECTS

Multicomm-Ensemble — multi-LLM weighted ensemble pipeline

A weighted multi-model orchestration pipeline for agentic coding frameworks. Routes tasks across GPT-4o, Claude, DeepSeek, and Qwen in parallel, filters candidates by running them against the task's real tests, then fuses the survivors with confidence-weighted aggregation. Built from dissertation research, with a mock mode that runs the full pipeline at $0 without API keys.

Python, LLMs, Async, Pydantic — github.com/Kavish07/Multicomm-Ensemble

Mauresto — restaurant website

A restaurant website with online menu browsing and table reservations.

React, Vite, JavaScript — github.com/Kavish07/mauresto

OnlineHealthSystem — hospital management web app

A full-stack hospital management system covering patient appointments, treatments, and role-based logins for patients, doctors, and admins. Built on raw Servlets and JSP/JSTL over JDBC and MySQL, with a jQuery front end — currently being incrementally migrated to Spring Boot.

Java, Servlets / JSP, JDBC, MySQL — github.com/Kavish07/onlinehealthsystem

SKILLS

Languages & Frameworks

Java / Spring Boot, Hibernate & JPA, .NET / Angular, TypeScript / React, C / C++

Databases & Infra

Oracle / PostgreSQL / MySQL, Docker / Kubernetes, RabbitMQ, Keycloak

Methods & Tools

Agile (Scrum) / UML, REST APIs, Git / GitLab CI/CD, JUnit / Postman

AI & Automation

Claude Code, Local LLMs, Microsoft Copilot Studio, Machine Learning / NLP

EDUCATION

Master's in Artificial Intelligence *Oct 2026*

University of Mauritius — completed.

Introduction to Mechatronics using the Arduino Board *2021*

School of Electronics.

Licence en Technologie de l'Informatique Appliquée (Bac+3) *2016*

Université des Mascareignes.

Diplôme Universitaire Supérieur de Technologie en Informatique Appliquée (Bac+2) *2014*

Université des Mascareignes.
